

To Whom it May Concern

In 2017, Lucas Laibly participated in a 2 month summer internship I led at Nexus Software LLC. The purpose of the internship project was to write automated tests which will be used by Quality Assurance for validating Nexus Software's financial device support. The tests were written in C# utilizing Visual Studio 2017 and NUnit 2.6.4. Writing the tests required learning an API specification and becoming familiar with banking printers.

I thoroughly enjoyed my time working with Lucas, and came to know him as a valuable asset to any team. Lucas arrived on time and put in a full day's effort each and every day. During the internship, Lucas was faced with tasks that demanded more from him than he had experienced in his academic classes. One example was designing how to discover and report differences in two collections of keys each with multiple values. Lucas rose to the challenge producing quality solutions that improved the overall project. Lucas' sense of humor and positive attitude was a boost to the entire team helping the team bond and work better as a whole. I confidently recommend Lucas to any organization.

Please feel free to contact me should you like to discuss Lucas' qualifications and experience further.

Sincerely,

Mike Buffington
