To Whom It May Concern:

Lucas Laibly recently participated in a 2-month internship at my company (Nexus Software LLC) at our North Carolina office (HQ is in Ohio) that started at the beginning of June 2017 and will complete at the end of July 2017.

Lucas was assigned to work on implementing automated test cases and processes to be used by our Quality Assurance group. It is a complex project involving software written in C# using NUnit (a unit test framework for .NET) and Microsoft Visual Studio. This assignment also required understanding various architecture and API specifications, and working directly with hardware (in this case the hardware was financial devices such as printers, PIN pads, cash dispensing and accepting machines, etc.).

With very little guidance Lucas was able to complete his development on time and with high quality. Lucas worked together with other developers and interns to help develop, integrate, and test all of the components. He was able to effectively identify, discuss, and resolve issues that were encountered, and was also able to quickly adapt to new requirements at the last minute and he knocked those out quickly and without duress.

Lucas has a cheerful and positive attitude and he clicked right away with our small company culture. He enjoys good food and swapping various stories. It was a great pleasure working with him and he has a bright future ahead of him. I hope to work with him again someday either at Nexus, or with a partner company.

Sincerely,
Chris Schnorr
